

Fast Track Science®: Where the elite meet to teach!

The National Science Center is building a talented cadre of math, science, and technology teachers to work with America's youth. Make this summer one to remember. An action-packed experience you'll talk about for years awaits you at The Fast Track.

Students analyze data to make fast cars even faster! The National Science Center's Fast Track Science® experience is packed with extreme remote-control racing action.

Help students participate in team-based driving challenges that demand the real process of science using the real application of math. Camps build teamwork and increase ability to perform math and science. That's right! At Fast Track Science® Summer Camp in your city, racing remote control cars can even boost brainpower.

That's where you come in ...

Fast Track Science® summer experiences are your opportunity to create lasting change in the educational community as elite American educators are trained to transfer their conceptual knowledge of math and science to U.S. classrooms.

Training is limited to top teachers with a love of numbers. Interest in racing is a plus but not required. We'll supply you with all the knowledge you need to build lifelong student interest in math and science.

Are you an educator on The Fast Track?

- ✓ I love numbers.
- ✓ I have taught/teach math, science or technology courses.
- ✓ I dive into math and science with enthusiasm.
- ✓ I hope my students are able to apply knowledge in real life.
- ✓ I have a good sense of humor.
- ✓ I enjoy learning!
